Twitter: [@allanrossman](https://twitter.com/allanrossman)  
Blog: <https://askgoodquestions.blog>

## Frank Sinatra

- What's the secret to being a successful singer?
- "Sing Good Songs"

## My similarly succinct suggestion

- What's the secret to being an effective teacher?
- "Ask Good Questions"

## I'm tempted to stop right now

- My take-home message
  - Ask Good Questions
- Quiz at end of presentation
  - Q: What was my point?
  - A: Ask Good Questions
- I have started writing a weekly blog
  - Name: Ask Good Questions
  - <https://askgoodquestions.blog>

## What kinds/purposes of questions?

- Guide students to develop their understanding and skills
  - Formative assessment
  - Learning activities
- Assess what students have learned
  - Summative assessment
  - Quiz/exam questions

## Examples of questions for teaching ...

- Statistical thinking
- Descriptive statistics
- Sampling and experimentation
- Probability
- Simulation-based inference
- Confidence intervals
- Hypothesis tests

## Statistical thinking

### ■ Example: Sex discrimination?

	Men	Women
Accepted	533	113
Denied	665	336
Total	1198	449

- Men:  $533/1198 \approx .445$  were accepted
- Women:  $113/449 \approx .252$  were accepted
- Does this provide evidence of discrimination against women?

## Statistical thinking

	Men		Women	
	Accepted	Denied	Accepted	Denied
Program A	511	314	89	19
Program F	22	351	24	517
Total	533	665	113	336

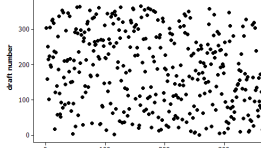

- Program A
  - Men:  $511/825 \approx .619$
  - Women:  $89/108 \approx .824$
- Program F:
  - Men:  $22/373 \approx .059$
  - Women:  $24/341 \approx .070$

## Statistical thinking

- Describe and explain the oddity, using the data given
- Most men apply to the easy program to get in; most women apply to the hard program to get in
- Multivariable thinking
  - Simpson's paradox

### Statistical thinking

- Example: 1970 Draft Lottery

- Any reason to doubt randomness?

Rossman presentation CMC3 - Monterey December 2019 10

### Statistical thinking

- Calculate median draft number for each month

Rossman presentation CMC3 - Monterey December 2019 11

### Statistical thinking

- Calculate median draft number for each month

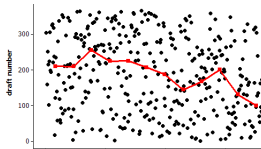

Jan 211	Jul 188
Feb 201	Aug 145
Mar 256	Sep 168
Apr 225	Oct 201
May 226	Nov 131.5
Jun 207.5	Dec 100

- Do you see a pattern/trend?

Rossman presentation CMC3 - Monterey December 2019 12

### Statistical thinking

- Example: 1970 Draft Lottery

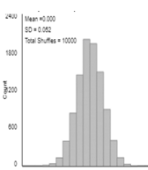

- Any reason to doubt randomness?

Rossman presentation CMC3 - Monterey December 2019 13

### Statistical thinking

- How often would such an extreme outcome occur with a truly random lottery?
- What statistic might you use to determine "extreme"-ness?

□ Correlation  $\approx -0.226$

Rossman presentation CMC3 - Monterey December 2019 14

### Descriptive statistics

- I suspect that when I moved from PA to CA, the average IQ dropped in both states!
- Is this possible?
- What would have to be true (in principle) for this to happen?
- Yes, if (my IQ > average IQ in PA) and (my IQ < average IQ in CA)

Rossman presentation CMC3 - Monterey December 2019 15

### Descriptive statistics

- Consider two new statistics:
  - Midrange = (maximum + minimum) / 2
  - Midhinge = (lower quartile + upper quartile) / 2
- For each statistic:
  - Is this a measure of center or variability?
  - Is this resistant to outliers?

Rossman presentation CMC3 - Monterey December 2019 16

### Descriptive statistics

- Suppose that Abby records the ages of customers at The Avenue (on-campus snack bar) from 11am-2pm today, while Mary records ages of customers at McDonald's (near freeway).
- Who will have the larger standard deviation of customer ages: Abby or Mary? Explain.

Rossman presentation CMC3 - Monterey December 2019 17

### Descriptive statistics

- Example (adapted from Jay Lehmann):
  - Which would be larger – the mean weight of 10 randomly selected people or the mean weight of 1000 randomly selected cats? Explain briefly.
  - Which would be larger – the standard deviation of the weights of 1000 randomly selected people or the standard deviation of the weights of 10 randomly selected cats? Explain briefly.

Rossman presentation CMC3 - Monterey December 2019 18

### Descriptive statistics

- Many of my students think that larger sample size produces smaller SD
- Do not realize that SD of the **sample mean** (or sample proportion) gets smaller as sample size increases
- Advice: When you talk about SD, always emphasize SD of **what**

Rossman presentation CMC3 - Monterey December 2019 19

### Descriptive statistics

- Exam scores have mean 70, SD 8
  - Arturo's score is 75
  - Bella's score is 1.5 SDs above Arturo's.
- What is Bella's score on the exam? Show your work.
  - Concept: Measuring distance as number of SDs away from *something*
  - Not necessarily away from *mean*

Rossman presentation CMC3 - Monterey December 2019 20

### Descriptive statistics

- Suppose that every student in our class scored 5 points lower on the second exam than on the first exam.
- What would be the value of the correlation coefficient between (exam1 score) and (exam2 score)?
  - Options: -5, -1, -0.5, 0, 0.5, 1, 5

Rossman presentation CMC3 - Monterey December 2019 21

### Sampling and experimentation

- Example: Gettysburg Address
- Select a sample of 10 words from the population of 268 words in the Gettysburg Address. (Just circle 10 words.)
- Record the length (# of letters) of each word.
- Calculate the average length for your sample.
- Produce graph of sample averages.

Rossman presentation CMC3 - Monterey December 2019 22

### Sampling and experimentation

Is this a reasonable sampling method for estimating the average word length in the population?

Rossman presentation CMC3 - Monterey December 2019 23

### Sampling and experimentation

Rossman presentation CMC3 - Monterey December 2019 24

### Sampling and experimentation

- How does this graph indicate sampling bias?
  - Would closing eyes and pointing be unbiased?

Rossman presentation CMC3 - Monterey December 2019 25

### Sampling and experimentation

- Example: Mandela's age
  - Group 1: Nelson Mandela was the first president of South Africa following apartheid.
    - Do you think he was older or younger than 16 years old when he died?
    - Make a guess for how old he was when he died.
  - Group 2: Nelson Mandela was the first president of South Africa following apartheid.
    - Do you think he was older or younger than 160 years old when he died?
    - Make a guess for how old he was when he died.

Rossman presentation CMC3 - Monterey December 2019 26

### Sampling and experimentation

- Example: Mandela's age
  - after 16
    - before 160
    - age guesses (years)
  - $t = -4.17$ ;  $p\text{-value} \approx .0000$
  - Very strong evidence of anchoring effect

Rossman presentation CMC3 - Monterey December 2019 27

### Sampling and experimentation

- Random sampling and random assignment are different tools with different purposes
- Random sampling
  - Goal: Select representative sample
  - Benefit: Generalize results
- Random assignment
  - Goal: Produce similar groups
  - Benefit: Draw cause-effect conclusions

Rossman presentation CMC3 - Monterey December 2019 28

### Repeated questions

- Example: Anchoring (Mandela's age)
  - What are the observational units in this study?
  - What are the variables in this study? Which type is each variable? Which variable plays which role?
  - Did this study make use of random sampling, random assignment, both, or neither?
  - Is this an observational study or an experiment?

Rossman presentation CMC3 - Monterey December 2019 29

### Probability

- 2018 General Social Survey
  - 47% had a pet dog
  - 25% had a pet cat
- Does it follow that 72% (which is 47% + 25%) had a pet dog or a pet cat?
  - What would be required for this to happen?

Rossman presentation CMC3 - Monterey December 2019 30

### Simulation-based inference

- Example: Facial prototyping
 

Do people tend to associate names with faces?

Who is on the left: Bob or Tim?

Rossman presentation CMC3 - Monterey December 2019 31

### Simulation-based inference

Example: Facial prototyping (cont)

- 36 of 46 students put Tim on the left
  - What are two possible explanations for our observed sample result?
  - Which explanation can we investigate/model? How?
  - How often would such an extreme sample result occur by chance alone (if there were no facial prototyping)?
  - Have students flip coins to investigate

Rossman presentation CMC3 - Monterey December 2019 32

### Simulation-based inference

- Facial prototyping: 10,000 simulated samples of 46 students

- Very strong evidence: people have a genuine tendency to put Tim on left

Rossman presentation CMC3 - Monterey December 2019 33

### Confidence intervals

- What does 95% confidence mean?
- Simulation:

Rossman presentation CMC3 - Monterey December 2019 34

### Confidence intervals

- What does 95% confidence mean?
- Simulation:

Rossman presentation CMC3 - Monterey December 2019 35

### Confidence intervals

- What does 95% confidence mean?
- Simulation:

Rossman presentation CMC3 - Monterey December 2019 36

### Confidence intervals

- What would change (two things) if the confidence level was increased or decreased?

Rossman presentation CMC3 - Monterey December 2019 37

### Confidence intervals

- What would change (two things) if the confidence level was increased or decreased?

Rossman presentation CMC3 - Monterey December 2019 38

### Confidence intervals

- What would change if the sample size was increased?

Rossman presentation CMC3 - Monterey December 2019 39

### Confidence intervals

- What would change if the sample size was increased?

Rossman presentation CMC3 - Monterey December 2019 40

### Confidence intervals

- Suppose that an alien lands on earth and sets out to estimate the proportion of human beings who are female
- The alien took a good statistics course on its home planet and knows to take a sample, produce a confidence interval
- Sample: the 2019 U.S. Senate, which has 25 women (the most ever!) and 75 men

Rossman presentation CMC3 - Monterey December 2019 41

### Confidence intervals

- Calculate the alien's 95% CI
  - $.25 \pm 1.96 \sqrt{\frac{.25 \times .75}{100}}$ , which is  $(.165 \rightarrow .335)$
- Interpret the CI for the alien
  - The alien is 95% confident that between 16.5% and 33.5% of all humans are female.
- Is this interval consistent with your experience as a long-time resident of this planet?
  - Duh!

Rossman presentation CMC3 - Monterey December 2019 42

### Confidence intervals

- Is the problem that 5% of all 95% CIs fail to capture actual value of population parameter?
  - No!
- Then what went wrong???
  - Biased sampling method!
- If the alien was only interested in estimating the proportion of 2019 U.S. Senators who are female, would this 95% CI make sense?
  - No, exactly 25% of current senators are female!

Rossman presentation CMC3 - Monterey December 2019 43

### Confidence intervals

- Random sample of 50 movies in "thriller" category from IMDb database

Rossman presentation CMC3 - Monterey December 2019 44

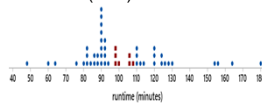

### Confidence intervals

- 95% confidence interval for population mean:
  - $101.70 \pm 2.010 \left( \frac{25.30}{\sqrt{50}} \right)$ , which is  $(94.5 \rightarrow 108.9)$  minutes
- What percentage of movies fall within this interval?
- Do you expect this to be close to 95%?

Rossman presentation CMC3 - Monterey December 2019 45

### Confidence intervals

- 7 of 50 movies (14%) fall within this interval

- CI estimates popn *mean*, not individual values
- Many students misunderstand this
  - Much more important than confidence level

Rossman presentation CMC3 - Monterey December 2019 46

### Intervals and tests

- Survey of 47,000 U.S. households in 2006 found that 32.4% had a pet cat
- Does this provide *very strong* evidence that the population proportion with a cat is different from one-third?
- Does this provide strong evidence that the population proportion with a cat is *very different* from one-third?

Rossman presentation CMC3 - Monterey December 2019 47

### Intervals and tests

- Does this provide *very strong* evidence that the population proportion with a cat is different from one-third?
  - Yes! Test stat  $z \approx -4.29$ , p-value  $\approx .00002$
- Does this provide strong evidence that the population proportion with a cat is *very different* from one-third?
  - No! 99.9% CI: (.317  $\rightarrow$  .331)

Rossman presentation CMC3 - Monterey December 2019 48

### Intervals and tests

- Hypothesis test and confidence interval give *consistent* results
  - Value one-third is rejected, does not appear in CI
- Statistical *significance* is different from practical *importance*
  - Especially relevant with large sample sizes

Rossman presentation CMC3 - Monterey December 2019 49

### My cats

Rossman presentation CMC3 - Monterey December 2019 50

### A question for you

- In the last 20 years, the proportion of the world population living in extreme poverty has ...?
  - Almost doubled
  - Remained more or less the same
  - Almost halved

Rossman presentation CMC3 - Monterey December 2019 51

### Human progress

"Over the past twenty years, the proportion of the global population living in extreme poverty has halved. This is absolutely revolutionary. I consider it to be the most important change that has happened in the world in my lifetime." – Hans Rosling

Rossman presentation CMC3 - Monterey December 2019 52

### Human progress

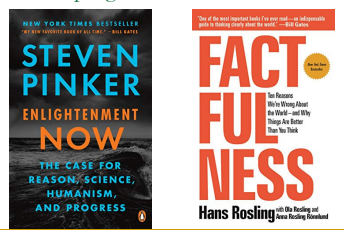

"Here is a shocker: *The world has made spectacular progress in every single measure of human well-being.*

Here is a second shocker: *Almost no one knows about it.*"

– Steven Pinker

Rossman presentation CMC3 - Monterey December 2019 53

### Human progress

Rossman presentation CMC3 - Monterey December 2019 54

### Human progress (more on inference)

- U.S. survey: 5% of 1005 answered correctly
- Do the sample data provide strong evidence that less than one-third of all Americans would answer correctly?
- Test statistic:  $z = \frac{.05 - .3333}{\sqrt{\frac{.3333 \times .6667}{1005}}} \approx -19.1$  (!!!)
- Overwhelming evidence that Americans do worse than random guessing on this question

Rossman presentation CMC3 - Monterey December 2019 55

### Human progress (more on inference)

- U.S. survey: 59% of 1005 answered "doubled"
- Estimate the proportion of all U.S. adults who would answer "doubled" with 95% confidence  
 $.59 \pm .030: (.560, .620)$
- Interpret this interval.
  - We are 95% confident that between 56% and 62% of all U.S. adults would give the most wrong answer to this question.

Rossman presentation CMC3 - Monterey December 2019 56

### Some final questions for you

- Have you ever attended a presentation titled
  - Ask Bad Questions?
- Have you ever attended a presentation titled
  - Don't Ask Questions?
- Of course not! So, ...
  - Why am I wasting your time with such obvious advice as "Ask Good Questions"??

Rossman presentation CMC3 - Monterey December 2019 57

### Yeah, why am I wasting your time?

- I respectfully suggest that the next time you (or I) feel compelled to invest our valuable time, thought, energy, and creativity on ...
  - Preparing crystal-clear lectures
  - Writing lucid paragraphs of exposition
  - Crafting beautiful presentations

Rossman presentation CMC3 - Monterey December 2019 58

### What should we do?

Rossman presentation CMC3 - Monterey December 2019 59

### What should we do?

- Resist this temptation!

Rossman presentation CMC3 - Monterey December 2019 60

### So, what do I suggest instead?

- Instead we should invest these precious commodities (time, thought, energy, creativity) on
  - Developing engaging classroom activities
  - Preparing thought-provoking assignments
  - Crafting effective assessment items
- In other words, we should be sure to ...

Rossman presentation CMC3 - Monterey December 2019 61

### What's the take-home message?

## Ask Good Questions!

Rossman presentation CMC3 - Monterey December 2019 62

### Thanks very much!
